

Tissue Donors and Research Subjects in the Global Bioeconomy: Experimental

The global bioeconomy is a rapidly growing industry that is transforming the way we live. Human tissue and data are increasingly being used to develop new medical treatments, diagnostics, and technologies. This has led to a growing demand for tissue donors and research subjects.

Clinical Labor: Tissue Donors and Research Subjects in the Global Bioeconomy (Experimental Futures)

The use of human tissue and data in the global bioeconomy raises a number of ethical, legal, and social implications. These include:

- **The recruitment and compensation of tissue donors and research subjects.** How are tissue donors and research subjects recruited and compensated? Are they informed about the risks and benefits of participation? Are they treated fairly?

- **The protection of tissue donors and research subjects.** What measures are in place to protect the privacy and confidentiality of tissue donors and research subjects? Are they protected from exploitation and abuse?
- **The ethical implications of using human tissue and data for commercial purposes.** Is it ethical to use human tissue and data for commercial purposes? How do we ensure that the benefits of the global bioeconomy are shared fairly?

This book explores these and other ethical, legal, and social implications of the increasing use of human tissue and data in the global bioeconomy. Drawing on case studies from around the world, the book examines the ways in which tissue donors and research subjects are recruited, compensated, and protected. It also considers the ethical implications of using human tissue and data for commercial purposes.

This book is essential reading for anyone interested in the ethical, legal, and social implications of the global bioeconomy. It is also a valuable resource for researchers, policymakers, and anyone else who works with human tissue and data.

Table of Contents

- 1.
2. The Recruitment and Compensation of Tissue Donors and Research Subjects
3. The Protection of Tissue Donors and Research Subjects

4. The Ethical Implications of Using Human Tissue and Data for Commercial Purposes
- 5.
